## INSTRUCTIONS

TITLE

### PHONE CASE WITH MARBLE EFFECT

FROM THE FEATURE

DIGITAL DIY

SISTERMAG

N°19

### MATERIALS

- » white phone case
- » big bowl with warm water
- » 1-2 nail polish of your choice
- » paper clamp
- » thin wooden stick
- » piece of cardboard, towel or paper towel
- » clear coat or transparent nail polish (to fix)

### HOW-TO

1. Fill up the bowl with warm water
2. clean the phone case, e.g: with a towel or paper towel. Fix a paper clamp on the edge of the case, just to make sure you can dip in the whole case into the water, without using your fingers
3. Put a few drops of the nail polish into the water and wait until the colour dispersed a little bit. (possible to put a second colour) Stir the color with a thin wooden stick. Attention: don't work too slow because the nail polish might stick to the water easily which causes an uneven surface on your case.
4. Dip the case into the water so the colour gets attached to it
5. Put the case on a towel or card board and wait until it's dry. If water drops formed use a towel to remove them carefully - don't wipe. Corrections can be done with a nail polish remover.
6. If desired, the process can be repeated on top after the first coat is completely dry
7. The case should be at least left to dry for two hours
8. To fix the marble effect apply clear coat or use transparent nail polish
