STEP 1

Mark the middle of your lid or circle and drill a hole. First use a smaller attachment and a piece of leftover wood underneath the hole to keep the wood from fraying.

STEP 2

Using the scissors, cut a piece of the woven cane that is slightly bigger than the diameter of your lid. Try by positioning the cane on the lid - if the cane covers your drilled hole, shift it slightly and adjust by carefully cutting the material to your needs.

STEP 3

Paint the wood glue onto one side of the netting and carefully place it onto your lid. As soon as it sits where you would like to, weigh everything down with books and let dry very well. Use a small pair of scissors to cut off excess cane and put in the clockwork.
